(54) ORGANIC ELECTROLUMINESCENCE ELEMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an organic electroluminescence element which can emit light of high luminosity and has high luminescence efficiency.

SOLUTION: The organic electroluminescence element has a luminescence layer 40, which is formed between both electrode layers of a positive electrode layer 10 and a negative electrode layer 70, and has a host agent 42 and a dopant 41, which emits phosphorescence, where as the host agent 42 of the above luminescence layer formed by wet processing method, the compound, which has oxadiazole group expressed with formula [I] or triazole group expressed with formula [II], is used.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
